

Call for Case Reports & Medical Images

Journal of Clinical Diabetology welcomes well-described reports of cases that include the following:

- Unreported or unusual side effects or adverse interactions involving medications.
- Unexpected or unusual presentations of diabetes.
- New associations or variations in diabetes.
- Presentations, diagnoses, and/or management of diabetes.
- An unexpected association between diabetes and its symptoms.
- An unexpected event in the course of observing or treating a diabetes patient.

Case reports submitted to *Journal of Clinical Diabetology* should make a contribution to medical knowledge and must have educational value or highlight the need for a change in clinical practice or diagnostic/prognostic approaches to diabetes.

Journal of Clinical Diabetology will not consider Case reports describing preventive or therapeutic interventions, as these generally require stronger evidence.

Case reports should include relevant positive and negative findings from history, examination, and investigation, and can include clinical photographs, provided these are accompanied by written consent to publish from the patient(s). Case reports should include an up-to-date review of all previous cases in the field.

Authors are encouraged to describe how the Case report is rare or unusual as well as its educational and/or scientific merits in the covering letter that will accompany the submission of the manuscript.

Case report submissions will be assessed by the Editors and will be sent for peer review if considered appropriate for the journal.

Call for Papers

Dear Colleague,

Submit your next manuscript to the *Journal of Clinical Diabetology* and take full advantage of:

- Convenient online manuscript submission
- High-quality peer-review service and average 4 weeks to editorial decision
- Accessible journal staff and frequent manuscript status updates
- No limits on number of figures or illustrations per article.

The primary purpose of the *Journal of Clinical Diabetology*, an official publication of the association of clinical diabetology, is to act as a source of updation for advances in diabetes management. The journal aims at providing most recent developments in the field of diabetes and its treatment to the clinician who is tackling patients with diabetes mellitus so that he is able to prevent the development of various complications, which can occur if left untreated or even under-treated. The journal also aims at compiling the current trends in thoughts of caregivers

active in the field of diabetes management as well as the latest in medical literature on the subject.

In addition to general articles on clinical aspects of diabetes mellitus, *Journal of Clinical Diabetology* also comprises articles on all areas of diabetes and its related syndromes. Topics covered relevant to the diabetic patient will include diagnosis, pathogenesis, and clinical management of: diabetes management, diabetic retinopathy, neuropathy and nephropathy; peripheral vascular disease and coronary heart disease; gastrointestinal disorders, renal failure and impotence; and hypertension and hyperlipidemia. *Journal of Clinical Diabetology* will also publish papers on the general pathogenesis and prevention of diabetes.

Send in your manuscript to drsamarbanerjee@gmail.com, aclidia2013@gmail.com

Yours sincerely,
Dr Samar Banerjee
Editor-in-Chief
